Abstracts

Electromagnetic Separators or Magnetic Separators are designed specifically to remove fine iron powders introduced to the base material during the grinding process. This is a process in which magnetically susceptible material is extracted from a mixture using a magnetic force. This separation technique can be useful in mining iron as it is attracted to a magnet. It is suitable for belts with a speed less than or equals to 4.5m/s. With this electromagnetic separator, materials are refined and iron impurities are collected.

According to our (Global Info Research) latest study, the global Electromagnetic Separators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
