## Abstracts

The global Electromyographic Biofeedback Instrument market size is expected to reach \$ 276.3 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

The electromyographic biofeedback instrument is characterized by being non-invasive and easy to use. It can help doctors or therapists understand the patient's muscle activity and evaluate muscle function and movement control. At the same time, the electromyographic biofeedback instrument can also be used for rehabilitation training to help patients improve muscle function and enhance motor control abilities.

The electromyographic biofeedback instrument is based on the principle of electromyographic biofeedback and combines low-frequency pulses of a certain intensity to electrically stimulate muscles to tense or relax them, thereby training and improving muscle function. Myoelectric biofeedback instrument can help patients restore normal muscle movement functions.
