Abstracts

The global Electron Beam Curing (EBC) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electron Beam Curing (EBC) is a type of radiation curing technology. High-energy electron beams directly interact with the system to be cured to cause polymerization, grafting or cross-linking reactions, thereby curing the material. The electron beam (EB) curing process generates less heat than UV and LED curing, providing a more complete cure with virtually no odor. EB units use up to 95% less energy than thermal drying and up to 80% less energy than UV curing.

This report studies the global Electron Beam Curing (EBC) demand, key companies, and key regions.
