According to our (Global Info Research) latest study, the global Electron Beam (EB) Accelerators market size was valued at USD 205.5 million in 2023 and is forecast to a readjusted size of USD 241.6 million by 2030 with a CAGR of 2.3% during review period.

The electron beam accelerator uses High Energy electrons as its radiation source. The High Energy electrons, generated by normal currents, are accelerated through the accelerator to near the speed of light and the electrons are focused to a fixed scanning angle to form a scanning curtain of electrons in a sweeping pattern. Finally, the speed of transmission of the product through the scanning curtain is precisely controlled.

Electron beam (EB) accelerators are a staple of industrial equipment used in many commercial radiation processing applications. EB accelerators are commonly used in various industrial, scientific, and medical applications due to their ability to produce High Energy electron beams. It was used in diverse industries to enhance the physical and chemical properties of materials and to reduce undesirable contaminants.
