The driving factors for electron beam irradiation sterilization equipment mainly include the following points:

**Microbial control:** Electron beam irradiation sterilization device can effectively kill bacteria, viruses and other microorganisms, thereby achieving the purpose of controlling and eliminating microorganisms. This is very important for food, medical and other fields, because the spread and control of microorganisms directly affect people's health and life safety.

**Environmental requirements:** Electron beam irradiation sterilization technology is an environmentally friendly disinfection and sterilization method. Because it does not use chemical reagents or radioactive substances, it will not cause pollution to the environment. This technology has been widely used in food, medical, agriculture and other fields because it meets people's requirements for environmental protection and health.

**Technology development:** With the continuous development of electron beam irradiation technology, the efficiency, effectiveness and economy of this sterilization method have been improved. At the same time, as people pay more attention to microbial control and increase environmental awareness, the market demand for electron beam irradiation

sterilization devices is also increasing.

Expansion of application fields: With the continuous development and improvement of electron beam irradiation technology, its application fields are also constantly expanding. In addition to being widely used in food, medical and other fields, it is also used in agriculture, industry and other fields.
