Abstracts

According to our (Global Info Research) latest study, the global Electron Lens market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Electronic lens is an electron optical system used to focus and image electron beams. Electron lens is a rotationally symmetric electrostatic field or electromagnetic composite field that enables electron beams to focus and form images after passing through it. When electron beams pass through a rotationally symmetric static electromagnetic field, they can achieve focusing and imaging, which is similar to the phenomenon that occurs when light passes through a glass lens. Applying voltage to metal electrodes will form a series of equipotential surfaces between the electrodes. These equipotential surfaces have the ability to make electron 'objects' 'images' in areas close enough to the symmetry axis. According to their composition and working principle, electron lenses can be divided into electric lenses, magnetic lenses and electromagnetic complex lenses. Electric lenses are mainly composed of electrostatic fields, while magnetic lenses are purely composed of magnetic fields, and electromagnetic complex lenses combine electrostatic and magnetic fields.

As an indispensable component in modern electronic devices, the market size of electron lenses has shown a steady growth trend in the past few years. Electron lenses are widely used in various electronic devices, such as mobile phones, tablets, TVs, cameras, etc. As consumers' requirements for the performance of electronic devices increase, electron lenses play an increasingly important role in improving the imaging quality of devices and user experience. As an emerging optical technology, superlens has the advantages of being thinner, lower cost, and better imaging, providing new opportunities for the development of the electron lens market. In the future, with the

continuous upgrading of electronic products and the continuous emergence of new technologies, the electron lens market will continue to maintain a high-speed growth trend.
