## Abstracts

The global Electronic Air Suspension System (EAS) market size is expected to reach \$ 27290 million by 2032, rising at a market growth of 6.5% CAGR during the forecast period (2026-2032).

Electronic air suspension system (EAS) is a kind of air suspension system which is controlled by an electrical system. Electronic air suspension system uses suspension dampers equipped with external inflatable air bags to control the height of the corners of the vehicle. The dampers may be either passive or controlled, and may be either struts or shock absorbers. A motor-driven air compressor provides high-pressure air to inflate the air bags, which act to elevate the height of that particular corner. When the air is let out in a controlled deflation, the vehicle returns to the desired trim height. Sensors are used to measure and compare the actual height of the vehicle to the desired height. The sensors send signals to an Electronic Control Unit (ECU), which automatically controls the activity of the air compressor and the inflation/deflation of the air bags.

The products in this report mainly cover electronic air suspension system in OE market and aftermarket.

Asia is the largest Electronic Air Suspension System (EAS) market with about 44% market share. Europe is follower, accounting for about 24% market share.
