According to our (Global Info Research) latest study, the global Electronic Air Suspension System (EAS) market size was valued at USD 14590 million in 2023 and is forecast to a readjusted size of USD 22540 million by 2030 with a CAGR of 6.4% during review period.

Electronic air suspension system (EAS) is a kind of air suspension system which is controlled by an electrical system. Electronic air suspension system uses suspension dampers equipped with external inflatable air bags to control the height of the corners of the vehicle. The dampers may be either passive or controlled, and may be either struts or shock absorbers. A motor-driven air compressor provides high-pressure air to inflate the air bags, which act to elevate the height of that particular corner. When the air is let out in a controlled deflation, the vehicle returns to the desired trim height. Sensors are used to measure and compare the actual height of the vehicle to the desired height. The sensors send signals to an Electronic Control Unit (ECU), which automatically controls the activity of the air compressor and the inflation/deflation of the air bags.

The products in this report mainly cover electronic air suspension system in OE market and aftermarket.
