Electronic Anaesthetic Vaporizer is a medical device that uses an electronic control system to accurately adjust the evaporation rate and output concentration of volatile anesthetic liquid. It uses sensors to monitor the temperature, pressure, flow and other parameters in the evaporation chamber in real time, and combines microprocessor control technology to dynamically adjust the release of anesthetic vapor to ensure that the output concentration is stable and meets clinical needs. Compared with traditional mechanical evaporators, electronic anesthesia evaporators have higher control accuracy, stronger environmental adaptability and a more convenient operating interface, which can effectively reduce anesthesia risks and improve surgical safety.
