## Abstracts

According to our (Global Info Research) latest study, the global Electronic Autocollimators market size was valued at US\$ 151 million in 2024 and is forecast to a readjusted size of USD 233 million by 2031 with a CAGR of 6.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The electronic autocollimators are non-contact optical test tools for the high-precision measurement of angular displacements of specular reflective surfaces and the accurate angular alignment of optical or mechanical parts.

The electronic self-collimator adopts modular design technology and consists of optical system, photoelectric conversion system and data processing system. The optical imaging system measures the change of angle of the measured plane, and the photoelectric conversion system is sensitive to the optical signal and converts it into an electrical signal for subsequent data processing system for analysis and evaluation.

Global Electronic Autocollimators key players include M?ller-Wedel GmbH, Trioptics, Taylor Hobson, and Edmund Optics, etc. Global top four manufacturers hold a share nearly 60%.

North America is the largest market, with a share about 60%, followed by Europe and Asia-Pacific, both have a share about 25 percent.

In terms of product, Digital Autocollimator is the largest segment, with a share over 55%. And in terms of application, the largest application is Optical Industry, followed by Mechanical Engineering, etc.
