Abstracts

According to our (Global Info Research) latest study, the global Electronic Bone Growth Stimulators (BGS) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bone Growth Stimulator (BGS) is an electrical device used in the medical industry for the healing process of a fracture. BGS enhances this process by stimulating the production of new cells by applying the proper amount of electrical energy to the bone, allowing the fracture to heal considerably faster. Stimulators are commonly used for hard-to-treat fractures, non-unions, and poorly healing stress fractures of the scaphoid, distal tibia, femur, humerus, and fifth metatarsal shaft. The bone growth stimulating results in an enhanced osteogenic environment with calcification and mineralization of the fibrocartilage, repairs the fracture site and increases vascularity.

The rise in obesity and the increase in a number of orthopedic injuries are the major driving factors for the growth of bone growth stimulator market. However, insufficient knowledge about the success rates of BGS and the higher treatment cost are the major restraints in the growth of the bone growth stimulator. Moreover, the increasing demand for safe, innovative and modern effective treatment techniques can create an opportunity for the bone growth stimulator market.
