Electronic Brake Booster is an automotive braking system component that replaces or assists traditional vacuum-based brake boosters through electric drive and electronic control technology. It provides rapid brake pressure generation, improved energy efficiency, and compatibility with advanced driver assistance systems and electrified vehicles. The product integrates electric motors, mechanical transmission mechanisms, sensors, control units, and hydraulic components. It is mainly used in passenger vehicles, electric vehicles, hybrid vehicles, and intelligent driving platforms. The product boundary includes integrated electronic brake booster assemblies and excludes standalone brake controllers, hydraulic units, and other braking components.

The electronic brake booster industry chain includes upstream suppliers of electronic components, sensors, motors, metal parts, hydraulic components, and automotive-grade materials; the midstream sector covers precision machining, electronic control integration, assembly, calibration, and testing; the downstream sector includes passenger vehicles, commercial vehicles, electric vehicles, and intelligent driving

systems. Industry growth is driven by vehicle electrification, increasing safety requirements, and the adoption of advanced braking technologies.
