According to our (Global Info Research) latest study, the global Electronic Calibration Service market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electrical test and measuring equipment is expected to provide precise, accurate readings. However, like any measuring tool, electronic testing equipment readings can become less accurate over time, drifting with continuous use. If the equipment tolerances aren't calibrated regularly, these tools can provide significant measurement errors that negatively affect performance and accuracy. As a result, electronic equipment must be calibrated regularly and frequently to ensure minimal downtime.
