According to our (Global Info Research) latest study, the global Electronic Component Cleaner market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An electronic component cleaner is a specialized cleaning agent designed to clean and remove flux residues from mounting boards in electronic devices. Commonly known as flux cleaners, these cleaners are essential for maintaining the integrity of electronic assemblies.

Electronic component cleaners also refer to contact cleaners used for cleaning various electronic equipment parts, such as harnesses, connectors, and sensors, especially in automotive applications. Typically available in spray form, these cleaners are convenient for use in maintenance workshops. Unlike contact revitalizers, they generally do not contain oil, making them safe for plastics and minimizing the need for post-treatment.
