Abstracts

eDHRs, or Electronic Device History Records, are paperless, electronic systems within manufacturing execution systems (MES) that enforce production processes and capture all information associated with as-built production records. eDHR provides the error-proofing and real-time visibility necessary to produce consistent product quality each and every time. Should product quality issues arise, eDHR can quickly contain suspect product, either in process or in the field, to take action to address the issue. The electronic records stored in eDHR yields information that can also help MD&D companies optimize production processes.

According to our (Global Info Research) latest study, the global Electronic Device History Record (eDHR) Software market size was valued at USD 257.6 million in 2022 and is forecast to a readjusted size of USD 522.3 million by 2029 with a CAGR of 10.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
