eDHRs, or Electronic Device History Records, are paperless, electronic systems within manufacturing execution systems (MES) that enforce production processes and capture all information associated with as-built production records. eDHR provides the error-proofing and real-time visibility necessary to produce consistent product quality each and every time. Should product quality issues arise, eDHR can quickly contain suspect product, either in process or in the field, to take action to address the issue. The electronic records stored in eDHR yields information that can also help MD&D companies optimize production processes.
