The electronic document resource repository solution is a comprehensive information system for the electronic management of official documents and archival resources. Through database technology and a document management platform, it achieves the digital storage, retrieval, classification, sharing, and secure management of official documents. The system typically includes functions such as document digitization, metadata management, full-text search, access control, workflow management, and long-term archiving, enabling centralized management of information resources such as policy documents, administrative documents, and reports. This solution improves document management efficiency, strengthens information security control, and meets the informatization management requirements of governments and institutions, and is widely used in government agencies, public institutions, large enterprises, and archival management institutions. The upstream of the electronic document resource repository solution industry chain includes database software, cloud computing infrastructure, document digitization equipment, data storage hardware, and information security technology. The midstream mainly involves software platform development, system integration, customized development, and deployment and maintenance services. Downstream application areas include government digital government platforms, enterprise knowledge management systems, archival informatization construction, and document management systems in industries such as finance, healthcare, and education, typically implemented and promoted through IT integrators and digital

transformation service providers. The overall industry gross profit margin is approximately 40%–65%.
