Abstracts

The global Electronic Equipment Cleaning Wipes market size is expected to reach \$ 1221 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of electronic equipment cleaning wipes is estimated at approximately 680 million packs, with an average selling price of around USD 1.2 per pack. Electronic equipment cleaning wipes are wet cleaning consumables specifically designed for cleaning consumer electronics and precision electronic device surfaces. They are typically made from nonwoven fabric materials combined with low-residue, fast-evaporating, and anti-static cleaning solutions, effectively removing fingerprints, oil stains, dust, and static residue while minimizing the risk of damage to screen coatings and sensitive components. These products are widely used for smartphones, tablets, laptops, monitors, televisions, camera equipment, keyboards, and automotive display systems. They are commonly sold in multi-piece packaging sets, with each pack containing multiple individually wrapped wipes. The structure generally includes nonwoven substrates, cleaning solution systems, and packaging structures, with differences in anti-static performance, alcohol content, coating compatibility, and environmental characteristics.

From a market structure perspective, electronic equipment cleaning wipes are an important segment within the consumer electronics cleaning consumables market. Demand is mainly driven by the growing installed base of consumer electronic devices, the trend toward larger displays, and increasing consumer awareness of hygiene and device maintenance. Smartphones, laptops, and monitors remain the primary application areas, while automotive displays, AR/VR devices, gaming peripherals, and premium office equipment are emerging as new growth segments. With the increasing

adoption of OLED, Mini LED, and advanced coated displays, demand for low-residue, coating-safe, and anti-static cleaning wipes continues to rise.
