Direct marketing is about making direct contact with existing and potential customers to promote the products or services. Direct marketing can be cost effective and extremely powerful at generating sales, so it is ideal for small businesses.

Direct marketing allows you to generate a response from targeted customers. As a result, small businesses can focus their limited marketing resources where they are most likely to get results.

A direct marketing campaign with a clear call to action can help you boost your sales to existing customers, increase customer loyalty, recapture old customers and generate new business.

In the Electronic Faucets industry, direct marketing only occupies a small share.

Indirect marketing is where there is no direct communication to end consumers by

companies. It is treated as the next step for establishing brand recognition and awareness. Manufacturers use indirect marketing when selling through wholesalers and other channels.

As opposed to the direct marketing technique, the indirect marketing strategy focuses on channels where there is no direct communication with customers by the companies. Therefore, it is mainly used to retain customer, increase customer's loyalty, and develop more business.

Unlike direct marketing, in case of indirect marketing there are no possibilities of feedback or two way communication. The response of indirect marketing is difficult to be measured.

A big disadvantage of indirect marketing is in the high costs of applying this strategy. The high costs can be incurred for publicizing the brand, or the costs for hiring the right people with the relevant skills and capacities for providing good content marketing. At the end, these high costs might not generate the anticipated number of customers in the future.

In the Electronic Faucets industry, indirect marketing only occupies most shares.

In the future, the Indirect Marketing will still be the main marketing channel. Indirect Marketing will still occupy most shares in the Electronic Faucets industry.

The worldwide market for Electronic Faucets is expected to grow at a CAGR of roughly 5.2% over the next five years, will reach 6090 million US\$ in 2023, from 4500 million US\$ in 2017, according to a new GIR (Global Info Research) study.
