Abstracts

According to our (Global Info Research) latest study, the global Electronic Gear Shifter market size was valued at US\$ 2291 million in 2025 and is forecast to a readjusted size of US\$ 3451 million by 2032 with a CAGR of 6.1% during review period.

An electronic gear shifter is a vehicle control device that manages gear selection through electronic signals rather than traditional mechanical or hydraulic linkages. The driver operates buttons, knobs, levers, or touch interfaces to send electronic commands to the vehicle control unit, which then actuates the transmission mechanism to change gears. This design reduces mechanical complexity, improves shifting accuracy and responsiveness, and supports integration with intelligent driving and drive-by-wire systems.

Upstream suppliers include automotive electronic chip manufacturers, sensor providers, precision actuator producers, and vehicle electronics integrators. Downstream applications mainly involve passenger vehicle automatic transmissions, new energy vehicle powertrains, and intelligent cockpit control systems. The overall industry gross margin generally ranges from 20% to 35%, positioning it within the automotive electronics and drive-by-wire control segment.

Global production of electronic gear shifters is projected to reach 13.5 million units by 2025, with an average price of \$165 per unit.
