According to our (Global Info Research) latest study, the global Electronic Grade Helium market size was valued at USD 4990.4 million in 2022 and is forecast to a readjusted size of USD 6966.3 million by 2029 with a CAGR of 4.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Helium, with the chemical formula He, is a colorless, odorless, non-toxic, non-corrosive gas. It is a rare gas with very inactive chemical properties and incombustibility. It is difficult to react with other substances under normal conditions. . It mainly comes from natural gas wells. Although helium is the second most abundant element in the universe, after hydrogen, it is extremely rare and limited on Earth. In the atmosphere, the volume concentration of helium is only 0.0005%, so it cannot be obtained in large quantities by air separation. Electronic helium has very high requirements on purity.
