According to our (Global Info Research) latest study, the global Electric Radiators market size was valued at USD 678.3 million in 2023 and is forecast to a readjusted size of USD 996.3 million by 2030 with a CAGR of 5.6% during review period.

Electric radiators are quite compact and can be easily fitted into small and narrow rooms. Some of the radiators are using liquid coolants such as mineral oils in order to produce heat. The electric current heats up the heating element, which subsequently heats the oil inside the radiator. There are no associated risks to using oil based radiators, whereas these electric appliances are tightened hermetically in order to prevent oil leakage. In addition to this, most of the radiators are equipped with a safety system that protects the radiator from overheating.

The amount of heat that is generated by an electric radiator is controlled by a thermostat installed within the radiator itself. Nevertheless, the radiator can be purchased without a thermostat, which will make it easier to integrate it into the house's central heating system connecting it to a boiler or to a heat pump, and be run from a common remote control post.

For centuries, people have been in a constant search for finding new ways to provide heat to their households, from big traditional fireplaces and large radiators to cost-efficient central heating systems. Since their first emergence on the market, the electric radiators have gone through a series of technical improvements, and what used to be a bulky, heavy and an expensive 'metal beast', is now a cost efficient and reliable electric heater with an improved temperature control.

To a great extent, electric radiators resemble the conventional water-based radiators. The difference lies in the fact that the former ones are using electric power instead of water for producing heat. The heat is released once electricity is passed through the radiator's heating element - an electrical resistor; thus, it can be stated that these radiators convert electricity into heat.
