Abstracts

The global Electronic Grade Polyphenylene Ether market size is expected to reach \$ 1441.2 million by 2030, rising at a market growth of 34.2% CAGR during the forecast period (2024-2030).

The production process of polyphenylene ether includes homogeneous solution polycondensation method and precipitation polycondensation method. Among them, homogeneous solution polycondensation method is the mainstream process. The production process of polyphenylene ether is complex and the process is long. Due to technical limitations, there are few companies in the world with a production capacity of 10,000 tons of polyphenylene ether. Electronic-grade polyphenylene ether is a key material for M6 copper-clad laminates and is expected to benefit from server architecture upgrades and the growth in demand for AI servers.

This report studies the global Electronic Grade Polyphenylene Ether production, demand, key manufacturers, and key regions.
