Electronic-grade ultrapure ozone gas generator is a device that can produce high-concentration, high-purity, high-pressure ozone gas. It is mainly used for thin film deposition, oxide growth, and photoresist removal in the fields of semiconductors, photovoltaics, and electronics. and cleaning processes. The principle of electronic grade ultra-pure ozone gas generator is to use high-voltage discharge or ultraviolet light to excite oxygen molecules in the air or oxygen, decompose them into oxygen atoms, and then combine with other oxygen molecules to form ozone molecules. In order to improve the purity and concentration of ozone, the electronic-grade ultra-pure ozone gas generator also uses cooling, liquefaction, separation, evaporation and other technologies to make the concentration of ozone gas close to 100% and free of impurities and moisture.
