Abstracts

According to our (Global Info Research) latest study, the global Electronic Invoicing Solution market size was valued at US\$ 2784 million in 2024 and is forecast to a readjusted size of USD 4609 million by 2031 with a CAGR of 7.7% during review period.

Electronic invoicing (also called e-invoicing) is a form of electronic billing. E-invoicing methods are used by trading partners, such as customers and their suppliers, to present and monitor transactional documents between one another and ensure the terms of their trading agreements are being met.

Market Trends

Intelligence and Standardization

The deep integration of blockchain, cloud computing, artificial intelligence and other technologies has promoted the development of electronic invoices in a more efficient and secure direction. Blockchain technology ensures the immutability and traceability of invoices, cloud computing provides support for massive data processing, and intelligent identification and automated classification technologies significantly improve the efficiency of financial and tax management. At the same time, the policies of various countries continue to increase the standardization process. For example, China, France, and the United Arab Emirates have clarified the legal effect of electronic invoices through legislation, and enforced the unified format (such as XML and OFD), laying the foundation for the interconnection and interoperability of global electronic invoices.

International collaboration

With the rapid growth of cross-border e-commerce, the demand for cross-border interaction of electronic invoices has surged. Countries are exploring the compatibility of rules through international cooperation, such as the EU's promotion of PEPPOL network standardization and the OECD's coordination of multi-country electronic invoice data mapping rules to reduce compliance costs in cross-border transactions. France, Poland, Latvia and other countries have clarified the mandatory implementation timetable for business-to-business (B2B) and government-to-business (B2G) electronic invoices (such as France's full implementation in 2026), reflecting the transition of the global electronic invoice system from regional pilot to large-scale implementation.

Ecological and sustainable development

The promotion of electronic invoices is no longer limited to a single function, but extends to the integration of industry, finance and taxation, and green and low-carbon directions. On the one hand, enterprises use electronic invoices to achieve supply chain collaboration, intelligent reimbursement and tax automation, forming a data-driven decision-making closed loop; on the other hand, its environmental attributes (reducing paper consumption) are highly consistent with low-carbon goals, becoming an important starting point for the 'green economy' policies of various countries. In addition, the ecological co-construction of multiple cooperation platforms (such as tax departments, third-party service providers, and blockchain alliances) has further enhanced the application depth and industry penetration of electronic invoices.
