The global Electronic Molded Case Circuit Breaker market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electronic molded case circuit breakers use electronic components to monitor the status of the circuit, which can quickly detect faults and cut off the circuit. Molded case refers to the use of plastic insulators as the casing of the device to isolate conductors and grounded metal parts. The electronic molded case circuit breaker is equipped with a multi-functional electronic trip controlled by a microcomputer, which has the function of switching rated current, adjustable tripping characteristics, and overload detection. The electronic molded case circuit breaker provides protection for the circuit and equipment in case of overload and short circuit in the distribution line and equipment, and can also provide overload and short circuit protection for the infrequent starting of the motor.
