According to our (Global Info Research) latest study, the global Electronic and Mechanical Digital Position Indicator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Electronic and mechanical digital position indicators are common types of digital position indicators. The electronic digital position indicator realizes position measurement and digital display through electronic technology, including components such as sensors, signal processing circuits, and digital display units. It has the characteristics of high precision, multi-function, and good readability. Mechanical digital position indicators achieve position measurement and digital display through a mechanical mechanism, usually consisting of gears, connecting rods, pointers, and dials.

Electronic digital position indicators are more widely used in various industries and fields due to their high accuracy, multi-function and easy readability. Mechanical digital position indicators may still have applications in some simple measurement requirements or special environments, and are gradually being replaced by electronic indicators.
