The global Electronic Paper Book Reader market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The electronic paper book reader has the characteristics of large capacity and portability, and can store thousands of electronic books. It is also lightweight and easy to carry. It can also connect to wireless networks to download the latest books and news, and generally speaking, e-readers have long battery life and can be used continuously for days or even weeks.

An e-book reader is an electronic device specially designed for reading e-books and documents. It uses e-paper or electrophoretic screen technology, which does not emit light itself but displays text and images by reflecting ambient light. Therefore, the electronic paper book reader will not produce dazzling light when reading like a traditional LCD display, but provides a reading experience closer to that of paper books.
