According to our (Global Info Research) latest study, the global Electronic Park Lock Actuator (EPLA) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Electronic park lock actuator (EPLA) has been designed for use in the latest automotive transmissions including EV applications. The Park Lock function is required for vehicles with automatic transmissions, in particular for electric or highly hybridized vehicles, in order to immobilize the vehicle during the parking phase and guarantee the safety of nearby people and property. Actuator is an electromechanical device, formed by DC electrical motor, an optimized mechanical transmission and an electronic control unit, communicated with the vehicle by CAN, LIN, PWM interface.

The traditional mechanical shifter system with cables or rod are replaced by electronic Shift-by-wire mechanism and actuator in the gearbox saving weight, space and improving interior design.?

The strong growth in the electrification of drive chains, reinforced by the growth in the automation of vehicles, has led to the implementation of electric actuators, whose action consists of activating a trigger in a toothed wheel in order to create positive locking of the transmission and immobilize the vehicle.
