The global Electronic Park Lock Actuator (EPLA) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The strong growth in the electrification of drive chains, reinforced by the growth in the automation of vehicles, has led to the implementation of electric actuators, whose action consists of activating a trigger in a toothed wheel in order to create positive locking of the transmission and immobilize the vehicle.

Electronic park lock actuator (EPLA) has been designed for use in the latest automotive transmissions including EV applications. The Park Lock function is required for vehicles with automatic transmissions, in particular for electric or highly hybridized vehicles, in order to immobilize the vehicle during the parking phase and guarantee the safety of nearby people and property. Actuator is an electromechanical device, formed by DC electrical motor, an optimized mechanical transmission and an electronic control unit, communicated with the vehicle by CAN, LIN, PWM interface.

The traditional mechanical shifter system with cables or rod are replaced by electronic Shift-by-wire mechanism and actuator in the gearbox saving weight, space and improving interior design.?
