E-passport is an electronic passport with high security printing, an inlay including an antenna and a microprocessor, and other security features. An E-passport is a biometric passport which includes a chip, which can be used at the automated E-passport gates instead of having your passport checked by a Border Force officer. The chip holds the same information that is printed on the passport's data page: the holder's name, date of birth, and other biographic information. In some countries, including Germany, E-passport include two fingerprints as well.

The tourism industry is the main driving force for E-passport. At present, the global tourism industry is undergoing unprecedented changes. Waves of new crown epidemics are driving industry transformation step by step. How these changes and trends will ultimately affect the future direction of the industry is still unclear.

In 2020, affected by the epidemic, the global tourism industry has experienced a sharp decline. With the control of the epidemic by various governments, the epidemic has gradually improved. From 2021, the annual tourism market is gradually rising. According to the conservative estimates, in 2024, the tourism industry will return to the state of 2019.
