Abstracts

According to our (Global Info Research) latest study, the global Electronic Performance and Tracking Systems (EPTS) market size was valued at US$ 1152 million in 2025 and is forecast to a readjusted size of US$ 2389 million by 2032 with a CAGR of 10.9% during review period.

Electronic Performance and Tracking Systems are sports technology systems used to collect, analyze, and visualize athlete movement, workload, positioning, speed, acceleration, distance, physiological indicators, and tactical behavior during training and competition. They may use wearable sensors, satellite positioning, local positioning, inertial measurement units, heart-rate modules, optical tracking cameras, base stations, software platforms, and cloud analytics. These systems are used by professional clubs, national teams, leagues, universities, academies, sports science departments, broadcasters, and performance analysts. This category excludes ordinary fitness trackers, consumer smartwatches, standalone heart-rate monitors, general video cameras without tracking analytics, venue ticketing systems, and sports management software without performance-tracking hardware or validated athlete data capture.The industrial chain of Electronic Performance and Tracking Systems includes upstream suppliers of positioning chips, inertial sensors, heart-rate sensors, cameras, antennas, batteries, wireless communication modules, microcontrollers, wearable housings, textiles, straps, charging docks, servers, cloud infrastructure, software development tools, data storage modules, optical components, cables, and packaging materials. The midstream consists of sports technology manufacturers and solution providers that design and assemble wearable devices, tracking tags, camera arrays, base stations, athlete monitoring platforms, data-processing algorithms, visualization dashboards, team-management interfaces, and analytics modules. Downstream users include

football clubs, basketball teams, rugby teams, hockey teams, universities, sports academies, leagues, national training centers, sports medicine departments, broadcasters, data service providers, and elite youth development programs.

The Electronic Performance and Tracking System market is moving from elite-team adoption toward broader use across professional, collegiate, academy, and semi-professional sports. Demand is driven by the need for workload control, injury-risk management, tactical analysis, player development, return-to-play monitoring, and fan-facing data products. Buyers increasingly evaluate data accuracy, sensor reliability, athlete comfort, software usability, integration with video analysis, coaching workflow fit, and the ability to turn raw tracking data into actionable performance decisions. Wearable systems have stronger scalability across training environments, while optical and local-positioning systems are valued for venue-level tracking and broadcast-grade analytics. Suppliers with validated data models, sport-specific analytics, strong service support, and flexible subscription models are better positioned. Main challenges include budget sensitivity outside elite sports, data privacy concerns, system interoperability, coaching adoption, and the need to prove performance impact beyond data collection. In 2025, global Electronic Performance and Tracking System production reached approximately 72.26 thousand units, with an average global market price of around US$15,500 per unit. The gross profit margin of major companies in the industry ranged from 34% to 55%. In 2025, the global production capacity of Electronic Performance and Tracking Systems was approximately 96.34 thousand units.
