According to our (Global Info Research) latest study, the global Electronic Shelf Label (ESL) System market size was valued at USD 1052.6 million in 2023 and is forecast to a readjusted size of USD 2614 million by 2030 with a CAGR of 13.9% during review period.

Electronic Shelf Label, also known by the acronym ESL. It is the latest solution for inventory and price management in the retail sector, based on the use of advanced IT technology. ESL replaces conventional paper price tags attached to the shelves of supermarkets and department stores with, for example, LCDs and electronic paper (E-paper) that show information on product price, sales promotions, etc.

ESL takes advantage of Zigbee, a low-power wireless communication technology, to keep product prices updated in real time. ESL consists of an e-paper equipped tag and gateway which delivers product information. The central server transmits information of each product to the gateway, which in turn sends such information to thousands of tags at the same time.

An electronic shelf label includes a transceiver configured to communicate with a plurality of wireless data tags associated with a plurality of retail products.
