Abstracts

An Electronic Shelf Label (ESL) is a system used by retailers to display the price of the product on the shelf and information related to it. The product price displayed on an ESL is automatically updated whenever a price is changed. ESLs can be highly advantageous to retailers as they offer the ability to make rapid pricing changes as often as needed or wanted, thereby helping retailers to reduce labor costs and improve pricing accuracy.

The main technologies used in the Electronic Shelf Labels (ESL) Driver Chips are electrophoretic display technology and bistable/multi-stable display technology. The bistable display technology is used for black and white two-color display, and the multi-stable display technology is used for black, white and red three colors display.
