The global Electronic Shock Absorber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electronic shock absorber is a new type of shock absorber that integrates mechanical shock absorption and electronic control. It can adjust the damping and hardness of the shock absorber in real-time through an electronic control system to adapt to different road conditions and driving needs. Electronic shock absorbers are usually composed of shock absorbers, sensors, electronic controllers, etc. Sensors can sense the motion status and road conditions of the vehicle. Electronic controllers can adjust the damping and hardness of the shock absorbers based on the feedback signals of the sensors, thereby achieving more accurate shock absorption effects. Electronic shock absorbers can improve vehicle handling and driving comfort, and are widely used in high-performance cars such as high-end sedans, sports cars, and racing cars.
