Abstracts

The global Electronic Side Mirrors market size is expected to reach \$ 1109 million by 2032, rising at a market growth of 9.6% CAGR during the forecast period (2026-2032). Electronic exterior rearview mirrors are automotive imaging vision systems that utilize onboard cameras and displays to replace traditional optical exterior rearview mirrors. Electronic exterior rearview mirrors provide a wider field of view and clearer real-time images, thereby improving driving safety and comfort. In 2024, global sales of CMS electronic exterior rearview mirrors reached approximately 793,000 units, with an average unit price of approximately US\$720 and an annual production capacity of approximately 25,000 units per production line. The upstream and downstream companies mainly include automotive camera module manufacturers, display drivers, control chips, sensors, and components such as wiring harnesses and housings. Downstream companies mainly include OEMs, automotive parts system integrators, and aftermarket service providers. Gross profit margins typically range from 25% to 35%. The product cost structure mainly includes camera module costs, display and driver board costs, processor and image processing chip costs, wiring harness and housing costs, software development and integration debugging costs, and quality testing and reliability verification costs. Products are categorized into two types based on display technology: LCD and OLED. Based on resolution, electronic exterior rearview mirrors can be categorized into high-definition and 4K types; based on functional combinations, they can be divided into basic image display types, types with blind spot monitoring and assistance functions, and types integrating autonomous driving assistance functions. On the demand side, downstream requirements include high-resolution image display, low latency, stable image transmission, strong light and nighttime optimization algorithms, low power consumption, compact structure, compatibility with multiple vehicle models, mounting interfaces, and connectivity with smart cockpits. Downstream customers include passenger car OEMs, commercial

vehicle manufacturers, automotive electronics system integrators, and automotive aftermarket service providers. Regarding business opportunities, policy drivers include countries promoting the upgrading of vehicle active safety regulations, encouraging the adoption of advanced vision assistance systems to reduce accident rates. Technological innovation drivers include high-performance image sensors, more efficient image processing algorithms, and deep integration of intelligent driving functions. Evolving consumer demands reflect consumers' continued pursuit of safer, smarter driving experiences and more aesthetically pleasing designs. These factors collectively drive the growth potential of the electronic exterior rearview mirror market. The electronic exterior rearview mirror market is at a critical stage of rapid penetration from high-end models to mainstream mid-to-high-end models, with both technology and regulatory environment driving the industry into a period of accelerated growth. As Europe, Japan, and China successively relax regulations on electronic rearview mirrors for road use, coupled with the accelerating integration of autonomous driving and smart cockpits, electronic exterior rearview mirrors are evolving from 'image replacement' to 'intelligent perception' modules. The iteration of their high-resolution cameras, low-latency image processing, and environmental perception algorithms makes them a crucial interface for enhancing the overall intelligent experience of vehicles. From the supply side, the cost of core components such as camera modules, displays, and control chips is rapidly decreasing, pushing the price of system assemblies towards the range of mass production. From the demand side, OEMs are actively adopting electronic rearview mirrors to reduce wind resistance and noise in order to meet energy consumption regulations and aerodynamic optimization requirements. Overall, driven by multiple factors including policy liberalization, technological maturity, and increased user acceptance, the electronic exterior rearview mirror market is expected to maintain double-digit annual growth over the next three to five years and become an important component of the intelligent driving vision system.
