According to our (Global Info Research) latest study, the global Electronic Special Gases for Integrated Circuits market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Electronic special gases refer to gases that are used in specific fields and have special requirements for product type, purity, formula, properties, etc. (purity is generally greater than 5N). It is widely used in the production process of semiconductors, flat panel displays and other electronic products, and is an indispensable key raw material in the production of the electronics industry. The core technical indicators of electronic special gases are ultra-purification and mixing processes. Large-scale integrated circuits require gas purity of up to 6N and above. At the same time, the impurity content of the gas must be less than 1×10^{-7} , and the technical barriers are extremely high.

The technical barriers to electronic special gas are high, and foreign companies still dominate the industry. There are three main barriers in the electronic specialty gas industry, namely manufacturing barriers, category barriers and customer barriers. High barriers make it more difficult to enter the industry, while foreign countries have seized the vast majority of the global market share by virtue of their first-mover advantage and continuous technology accumulation.
