According to our (Global Info Research) latest study, the global Electronic Spirometry Device market size was valued at US\$ 800 million in 2025 and is forecast to a readjusted size of US\$ 1272 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global production of electronic spirometry devices reached 4.32 million units, with an estimated average selling price of US\$180 per unit. An electronic spirometry device is an electronic testing device used to measure basic respiratory function, including lung volume and expiratory flow rate. Key indicators include VC/SVC, FVC, FEV1, FEV1/FVC, PEF, and MVV. It is primarily used to assess lung ventilation function, screen for airflow limitation, assist in the diagnosis and follow-up of COPD, asthma, occupational lung diseases, preoperative lung function risk, and manage chronic respiratory diseases. The upstream of the industry chain mainly includes MEMS pressure sensors, flow sensors, ultrasonic transducers, MCUs/processors, PCBAs, batteries, LCD screens, plastic structural parts, disposable mouthpieces, bacterial filters, calibration cylinders, data transmission modules, algorithm software, and cloud platforms; the midstream involves the design, software development, sensor calibration, registration and certification, and assembly and testing of spirometers and spirometers; downstream demand comes from hospitals, clinics, health check centers, occupational health institutions, schools, elderly care facilities, and family health management channels. Gross profit margin is approximately 20%-40%.
