## Abstracts

According to our (Global Info Research) latest study, the global Electronic Standby Instrument System market size was valued at US\$ 876 million in 2024 and is forecast to a readjusted size of USD 1225 million by 2031 with a CAGR of 5.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The electronic standby instrument system is a redundant backup device in avionics, providing key flight data (such as attitude, airspeed, altitude, heading) when the primary flight display (PFD) fails. It integrates solid-state sensors (MEMS gyroscope, barometer), high-brightness display and independent power supply to ensure reliability under extreme conditions (such as power failure, electromagnetic interference), and complies with DO-178C/DO-254 aviation safety standards. It is used in commercial airliners, business jets and military aircraft.

This report is a detailed and comprehensive analysis for global Electronic Standby Instrument System market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
