Electronic Support (ES) – also called Electronic Support Measures (ESM) – is the provision of military intelligence via a range of electromagnetic surveillance and collection devices, giving decision-makers timely insights to use in their electronic protection, electronic attack, or other electronic warfare systems.

The military industry is undergoing rapid modernization and technological advancements. Countries around the world are investing in advanced defense systems, equipment, and technologies to enhance their military capabilities. This includes the development and procurement of high-tech weapons, surveillance systems, communication systems, cybersecurity, drones, autonomous vehicles, and artificial intelligence. The need to stay ahead in modern warfare and maintain a competitive edge is driving the demand for advanced military equipment and technologies. Geopolitical tensions among nations have led to an increase in defense spending globally. Many countries are now allocating higher budgets for defense purposes to enhance their national security. This surge in defense budgets is driving the demand for military equipment and boosting the growth of the military industry. Key regions like the Asia-Pacific, Middle East, and Europe are witnessing significant defense spending and procurement activities. The military industry is expected to witness continued growth and transformation driven by modernization efforts, technological advancements, increased defense spending, focus on cybersecurity, adoption of unmanned systems, sustainability initiatives, and collaboration among nations. Manufacturers and suppliers

in the military sector need to adapt to these trends and cater to the evolving needs of defense organizations worldwide.
