## Abstracts

Electronic temperature indicators used in the cold chain transportation industry are devices designed to monitor and record temperature conditions during the transportation of temperature-sensitive goods such as pharmaceuticals, perishable foods, and vaccines. These indicators typically consist of sensors or probes that measure temperature and electronic circuitry that processes and stores temperature data. They are often equipped with digital displays or interfaces for real-time monitoring and may also include features such as alarms to alert users to temperature excursions beyond preset thresholds. Electronic temperature indicators play a crucial role in ensuring the integrity of products throughout the cold chain, helping to maintain quality, safety, and compliance with regulatory requirements.
