According to our (Global Info Research) latest study, the global Electronic Thermal Management Materials market size was valued at USD 184.2 million in 2023 and is forecast to a readjusted size of USD 262.2 million by 2030 with a CAGR of 5.2% during review period.

All electronic devices and circuitry generate excess heat and thus require thermal management to improve reliability and prevent premature failure. The amount of heat output is equal to the power input, if there are no other energy interactions. There are several techniques for cooling including various styles of heat sinks, thermoelectric coolers, forced air systems and fans, heat pipes, and others. In cases of extreme low environmental temperatures, it may actually be necessary to heat the electronic components to achieve satisfactory operation.
