The global Electronic Thermally Conductive Silicone Sealant market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermally conductive RTV (Room Temperature Vulcanizing) silicone sealant is a specialized type of adhesive or sealant that is designed to have good thermal conductivity properties. It is commonly used in electronic and electrical applications where heat dissipation is important. This silicone sealant is formulated with thermally conductive fillers or particles, such as metal oxides or ceramics, which allow it to transfer heat efficiently. It has a high thermal conductivity value, typically ranging from 0.5 to 3.0 W/m·K, which is much higher than standard silicone sealants.
