## Abstracts

According to our (Global Info Research) latest study, the global Electronic Type Residual Current Circuit Breaker market size was valued at US\$ 853 million in 2025 and is forecast to a readjusted size of US\$ 1133 million by 2032 with a CAGR of 4.2% during review period.

Electronic type residual current circuit breaker refers to a leakage protection appliance with overcurrent protection function. It is mainly suitable for applications that require both overcurrent protection (overload and short circuit) and ground fault current protection functions. It can detect faults and trip in time. Ensure the safety of staff and equipment.

The upstream sector primarily involves electronic components, precision hardware, and insulation materials. Core components include leakage current detection integrated chips, miniature current transformers, tripping mechanisms, and flame-retardant housings. Among these, high-performance detection chips and high-permeability current transformer cores are crucial in determining sensitivity.

Product prices vary depending on brand, specifications, and number of poles, typically ranging from \$25 to \$50 per unit. Global sales are projected to exceed 20 million units by 2025, with industry gross margins generally around 25%-35%.

With the deep integration of the Internet of Things (IoT) and edge computing technologies, circuit breakers are no longer simply physical tripping devices, but have evolved into intelligent terminals with millisecond-level current waveform analysis, fault prediction, and remote operation and maintenance capabilities. The widespread

adoption of new energy vehicles, photovoltaic energy storage systems, and DC data centers has created a rigid demand for Type B (full-wave protection) electronic circuit breakers with self-diagnostic functions. The pulsating DC and smooth DC fault currents generated in these scenarios can only be effectively captured through high-precision electronic detection technology. Furthermore, the 'smart and safe grid' policies mandated by many governments require real-time reporting of power outages in public buildings and industrial sites, directly driving the shipment volume of electronic circuit breakers.
