According to our (Global Info Research) latest study, the global Electronic Water Pump for New Energy Vehicle market size was valued at US\$ 2008 million in 2024 and is forecast to a readjusted size of USD 6801 million by 2031 with a CAGR of 17.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Water pumps are mainly used in the main cooling system of internal combustion engines, turbocharger cooling circuits and intake intercooling systems, and are also used in the drive system and power battery thermal management system of new energy vehicles. The water pumps in electric vehicles are generally electronic water pumps (also known as 'electric water pumps'), which are mainly used for circulating cooling of drive motors, electric components, power batteries, etc.

Compared with mechanical water pumps used in thermal management of traditional fuel vehicles, the core components of the thermal management system of new energy vehicles represented by electronic water pumps are mainly used for circulating cooling of drive motors, electric components, power batteries, etc., and the usage and value of each vehicle have increased by 2-3 times. For new energy vehicles, electronic water pumps can also improve energy utilization efficiency, that is, the motor speed is flexibly adjusted according to the needs of the cooling system, and the circulation speed of the coolant is automatically adjusted under different operating conditions of the vehicle to avoid unnecessary energy consumption, which will increase the vehicle's cruising range

to a certain extent.

From a product perspective, electronic water pumps have become the mainstream choice for new energy vehicles due to their long service life, small size, high precision, low energy consumption, high reliability, compact structure, and strong sealing. They are expected to replace the mechanical water pumps of traditional fuel vehicles in the future.

Electric water pumps are evolving from simple coolant circulators to intelligent, integrated components central to EV performance and sustainability. Future trends emphasize smart control, material innovation, and system integration, driven by demands for energy efficiency, reliability, and adaptability across diverse vehicle segments. As EVs scale globally, EWPs will play a pivotal role in enabling next-gen technologies like ultra-fast charging, autonomous driving, and zero-emission mobility.

In terms of product type and technology, the Electronic Water Pump for New Energy Vehicle mainly include 12V Electric Water Pump, 24V Electric Water Pump, and Others. 12V Electric Water Pump is a relatively popular and widely used for Electric Vehicles, 12V Electric Water Pump accounting for 58.11% of the Electronic Water Pump for New Energy Vehicle global market in 2024. The Electronic Water Pump for New Energy Vehicle market will bifurcate into low-voltage (12V/24V) for niche/auxiliary uses and high-voltage systems for mainstream EVs, with innovation focused on smart controls, material science, and integration with next-gen thermal management architectures. Suppliers like Bosch, Rheinmetall, and Nidec will lead in developing voltage-agnostic, modular solutions to cater to diverse global markets.

From the perspective of product market applications, Electronic Water Pump for New Energy Vehicle mainly include BEV. In 2024, BEV accounted for 69.44% of the total market, Battery Electric Vehicles (BEVs) segment is altered to a 22.16% CAGR throughout this forecast period and will hold a share about 77.27% in 2028. The Electronic Water Pump for New Energy Vehicle market will bifurcate, with BEVs driving cutting-edge advancements (high-voltage, smart systems) and PHEVs sustaining demand for hybrid-optimized pumps. Sustainability, connectivity, and regional regulatory shifts will shape both segments, but BEVs will lead long-term growth as global electrification accelerates.

At present, major global main manufacturers of Electronic Water Pump for New Energy Vehicle include Bosch, GMB, Continental, Valeo, Hanon Systems, Aisin, Rheinmetall Automotive, Gates, MAHLE, Buehler Motor, SANHUA Automotive, Feilong Auto
