According to our (Global Info Research) latest study, the global Electronically Controlled Permanent Magnet Chuck market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electronically controlled permanent magnet chucks, a hybrid of the permanent and electromagnetic type. This device locks the part with a jolt of electricity and then uses another jolt of electricity to unlock it. If there is a power outage while working a part, the chuck continues to hold tightly. Each magnet has an electrical coil around it that can reverse the polarity of the magnet extremely quickly. Another function of the coil is to control the amount of magnetic pull the magnetic chuck exerts.
