Abstracts

The electronically scanned arrays market has been segmented on the basis of type, platform, range, array geometry, component, and region. The type segment has been further divided into active and passive electronically scanned arrays. Among them, the active segment is projected to grow at the highest CAGR from 2016 to 2021. Active electronically scanned arrays encompass individual transmit/receive modules, which offer increased capability to these arrays for detecting numerous objects at a particular point of time. Several defense organizations worldwide have started installing active electronically scanned array (AESA) radars in defense aircraft to enhance tracking capabilities.

SCOPE OF THE REPORT:

This report focuses on the Electronically Scanned Arrays in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Replacement of traditional electronically scanned array systems and integration of active electronically scanned arrays with traditional radar system components are key factors expected to drive the growth of the electronically scanned arrays market. Based on platform, the electronically scanned arrays market has been segmented into land, naval, and airborne. Among them, the land segment is anticipated to grow at the highest CAGR from 2016 to 2021. Land-based electronically scanned arrays are used to obtain real-time information in warfare situations. Furthermore, land-based systems can also effectively locate unexploded ordinance and tunnels.

The worldwide market for Electronically Scanned Arrays is expected to grow at a CAGR

of roughly 7.1% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
