Abstracts

The global Electronically Steerable Flat Panel Satellite Antenna market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Flat Panel Satellite Antenna is composed of many radiating elements that can be thought of as numerous, tiny, fixed antennas. Each one has a phase shifter which forms beams by shifting the phase of the signal emitted from each of the radiating elements (tiny antennas). This provides a constructive/destructive interference which may be used to steer the beam(s) in a particular direction. An Electronically Steerable Antenna or ESA is an electronically-controlled array of antenna elements that can be electronically steered to point in different directions without moving the antenna itself. Electronically steered antennas can solve the drifting issue without the need for large mechanically controlled dishes moving back and forth. These flat-panel antennas make non-stationary satellite tracking easy by allowing them to move seamlessly from one satellite to another.

This report studies the global Electronically Steerable Flat Panel Satellite Antenna production, demand, key manufacturers, and key regions.
