According to our (Global Info Research) latest study, the global Electroplated Steel Grating market size was valued at US\$ 18289 million in 2025 and is forecast to a readjusted size of US\$ 23004 million by 2032 with a CAGR of 3.3% during review period.

Electroplated steel grating is a metal grating product made from carbon steel or alloy steel as the base material, formed by welding or press-locking, and then subjected to surface treatment processes such as electroplating zinc. It features high load-bearing capacity, corrosion resistance, slip resistance, and good drainage performance, and is widely used in industrial platforms and municipal engineering projects.

Upstream industries mainly include raw materials such as steel, zinc ingots, electroplating chemicals, and auxiliary materials; downstream applications are concentrated in industrial plant platforms, petrochemical and power facilities, sewage treatment plants, ports and docks, municipal engineering projects, building staircases and walkways, etc. The global price of electroplated steel grating is US\$680 per ton, with annual sales of approximately 16.1 million tons, a global annual production capacity of 20 million tons, and an industry profit margin of 25%.
