## Abstracts

According to our (Global Info Research) latest study, the global Electrospinning Nozzle market size was valued at US\$ 81.6 million in 2024 and is forecast to a readjusted size of USD 126 million by 2031 with a CAGR of 6.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The electrospinning machine nozzle is a key component used in the electrospinning process. By applying high voltage, the polymer solution is ejected from the nozzle to form long and thin fibers. In this process, the nozzle is not only responsible for the delivery of the solution, but also generates a strong electric field, so that the polymer solidifies into ultra-fine fibers during flight, which is used to manufacture various non-woven fabrics or functional materials.
